

Automated Lead Enrichment System

A smart system that automatically collects, researches, and organises incoming business leads — so your sales team always knows who to call first.

What it does	Collects a lead, looks them up online, and saves their info automatically
Tools used	Typeform · Zapier · Apollo.io · MySQL Database · Google Sheets · Slack · Gmail
Who benefits	Sales teams who want to stop doing manual research on every new lead
Time saved	Minutes of manual work per lead, done instantly by the system
Built by	Sydney Rey De Leon · AI & Automation Specialist

What Is This Project?

Imagine you run a business and someone fills out a contact form on your website. Normally, a team member would have to manually look up that person's company, figure out how big the company is, decide if they're worth calling, and then type all their details into a spreadsheet. That takes time — and it's easy to make mistakes.

This system does all of that **automatically**, in seconds. The moment someone fills out a form, the system kicks in, researches the company, decides how important the lead is, saves everything neatly, and alerts the right person on the sales team — all without anyone lifting a finger.

0	<2s	2	100%
Manual Steps	Time to Insight	Priority Levels	Data Saved
Everything is handled automatically	Seconds from form submit to team alert	Big companies and small ones handled differently	Every lead stored safely in a database

How Does It Work? — Step by Step

Here's what happens, from the moment someone fills out a form to the moment your sales team gets notified:

1

Someone fills out a form

A person visits your website and fills in their name, email, and company. This is done through a tool called Typeform — think of it like a smart online form.

2

The system cleans up the info

The system automatically tidies up what was submitted. For example, if someone typed their email as 'john@stripe.com', the system pulls out just 'stripe.com' so it can look up the company properly.

3

It looks up the company automatically

The system sends that company name to Apollo.io — a business intelligence tool — and gets back useful information like: How big is the company? How many employees do they have? What's their website? All in seconds.

4

It decides how important the lead is

Based on company size, the system decides: Is this a big enterprise company (over 1,000 employees)? Or a smaller business? Big companies go to the High Priority list. Smaller ones go to the Low Priority list.

5

Everything gets saved to a database

All the information — name, email, company, size — gets saved into a secure online database. Think of it like a super-organised digital filing cabinet that never loses anything.

6

The sales team gets notified immediately

For big companies: the team gets an instant Slack message (like a chat notification) so they can follow up fast. For smaller companies: a neat email gets sent with all the details. Either way, no one has to manually check anything.

The Two Priority Paths

Not all leads are the same. A Fortune 500 company with 50,000 employees needs a faster response than a 10-person startup. This system handles that automatically:

HIGH PRIORITY	LOW PRIORITY
Large companies with more than 1,000 employees	Smaller companies with fewer than 1,000 employees
Instant Slack alert to the sales team	A detailed email sent to the sales team
Saved to the High Priority sheet	Saved to the Low Priority sheet

Why does this matter? Speed is everything in sales. When a big company reaches out, the faster your team responds, the better chance you have of winning that deal. This system makes sure the most valuable leads never wait.

Where Is the Data Stored?

Every lead that comes through the system gets saved in two places:

MySQL Database (Main Storage)

Think of this like a secure, professional filing system. It lives on a server online and keeps every lead's details permanently. It never gets accidentally deleted or overwritten.

Google Sheets (Easy Viewing)

A copy also goes into a Google Spreadsheet so the sales team can easily browse, filter, or export leads without needing any special tools. High Priority leads have their own tab. Low Priority leads have theirs.

Here's a sample of real data saved in the database:

Name	Email	Company	Employees	Priority
------	-------	---------	-----------	----------

Sydney De Leon	sydneyrey.tech@...	It Starts with U	228,000	High
Kyle Dizon	kdizon@linear.app	Linear	180	Low
Test ER	test@stripe.com	Stripe	15,000	High

Problems I Solved Along the Way

Building this system wasn't without challenges. Here are a few real problems I ran into and how I fixed them — explained simply:

Wrong company information was showing up

The Problem: When someone used a regional email address (like @company.sa.com), the system sometimes pulled up Microsoft's info by mistake — because the research tool didn't recognise that email format.

The Fix: I added a step that cleans up the email before the lookup happens, making sure only the right part gets sent to the research tool.

Old test data was mixing with real data

The Problem: When I was testing the system, sometimes it would use old saved test information instead of fresh real data — meaning things got saved incorrectly to the database.

The Fix: I fixed this by always running a full test from the very beginning each time, instead of testing one piece at a time. That way everything stays in sync.

Some fields were being saved as blank

The Problem: The first time I set up the database, some important details like company size were saving as empty even though the information existed.

The Fix: I rebuilt the database structure properly first, making sure every column was clearly defined before connecting it to the automation — like setting up the right shelves before putting books on them.

Why This Matters for Your Business

This project is a real example of how automation can save time, reduce mistakes, and help businesses move faster. Here's the simple bottom line:

**No more manual research**

Your team doesn't need to Google every new lead. The system does it for them, instantly.

**No more missed opportunities**

Big leads get flagged immediately — no risk of an important company sitting unnoticed in an inbox.

**No more messy spreadsheets**

Everything is saved cleanly and automatically. No typos, no duplicates, no forgotten entries.

**Scales as you grow**

Whether you get 5 leads a day or 500, the system handles it exactly the same way, every time.
